Dunlop Heywood's rating audit team highlighted a potential saving to Fujifilm Imaging Colorants following a forensic analysis of charges and information held in relation to their assessment under the administration of Manchester City Council.

Following an instruction to proceed, Dunlop Heywood secured the savings for Fujifilm within 21 days after communicating with Manchester City Council to ensure the refund was returned to our client as quickly and efficiently as possible.

Key aspects of a Dunlop Heywood audit:

- Non Speculative - Dunlop Heywood only engage with potential clients where an opportunity has been highlighted. In roughly 90% of these cases the opportunity highlighted will result in a saving.
- Efficiency Following Engagement - Many of our clients have retained agents who also look at aspects of rating audit. We find that the opportunities we are able to highlight have often been missed as part of wider projects. Our specificity allows a quick turnaround following instruction as the research has been carried out prior to engagement.
